SUMMARY

Research Associate and PhD Candidate in Causal Inference Methods in Meta-Analysis. Experienced in biostatistics, causal inference, and health data analytics. Research interests focus on statistical methods for evidence synthesis, including individual participant data (IPD) meta-analysis, causal transportability, treatment-effect heterogeneity (CATE), and population-adjusted indirect comparisons. Committed to transparent and reproducible research workflows using R, Quarto, and Shiny.

EXPERIENCE

Research Associate & PhD Candidate | *University of Ioannina* | May 2026 - Present

- Conduct advanced methodological research focusing on causal inference methods within meta-analysis.
- Investigate causal transportability frameworks and population-adjusted indirect comparisons algorithms.
- Perform and design pipelines for Health Data Analytics Tasks.
- Serve as an instructor for the summer school "Introduction to meta-analysis and network meta-analysis", organized by the Evidence Synthesis Methods Team.

Laboratory Instructor — Medical Statistics | *Aristotle University of Thessaloniki (AUTH)* | 2025 - 2026

- Taught the Medical Statistics laboratory to undergraduate medical students and contributed to the preparation of the laboratory exercise materials.
- Introduced basic statistical concepts and guided students in applying them to clinical research questions using the Jamovi statistical software.
- Actively promoted interactive discussions and received highly positive student evaluations reflecting strong academic competence and professional conduct.

EDUCATION

MSc in Health Statistics and Data Analytics | *Aristotle University of Thessaloniki* | Oct 2024 - Feb 2026

- Cumulative GPA: 9.37/10.
- Thesis: Development of a Tool for Living Network Meta-Analysis for Chronic Lymphocytic Leukemia (CLL).

BSc in Mathematics | *University of Ioannina* | 2019 - 2024

- Focus Area: Statistics and Programming.
- Cumulative GPA: 6.68/10.

SKILLS

- **Biostatistics & Meta-Research:** Meta-Analysis, IPD Meta-Analysis, Network Meta-Analysis (NMA), Component NMA, Causal Transportability, Real-World Evidence (RWE).
- **Advanced Statistical Modelling:** Causal Inference, Generalized Linear Models (GLMs), Generalized Additive Models (GAMs), Linear Mixed Models, Predictive Modelling.
- **Programming Languages & Tools:** R (Shiny, netmeta, lme4, grf, targets), Python (NumPy, Pandas, scikit-learn), SQL, Quarto, R Markdown, HTML/CSS.

PROJECTS

MSc Thesis: Living Network Meta-Analysis Tool (Shiny) | *R, Shiny, netmeta*

- [GitHub Repository](#)
- Developed a full-stack, modular R Shiny web application to automate frequentist Network Meta-Analysis (NMA) and Component NMA (additive and interaction models).
- Engineered data pipelines for automated arm-level data conversion and implemented advanced diagnostics (node-splitting, P-scores).

Living NMA/CNMA Research Website | *Quarto, WebAssembly (webR)*

- [Live Site](#)
- Architected a reproducible, transparent Quarto website deployed via GitHub Pages, enabling serverless, in-browser interactivity for node-merging and analysis without a backend server.
